

Point to Point

Connect your branches. Stay off the public Internet.

Jenny Point to Point is a private link between two or more of your sites. Your traffic moves directly between branches across our network and never touches the public Internet, so your servers, cameras and internal systems are not exposed to it either.

Why choose Jenny Point to Point?

- Branch-to-branch data never travels over the public Internet
- Unmetered and unshaped. Move what you like, as fast as the link allows
- Separate from your Internet traffic, so it does not compete with browsing
- Continuously monitored on our side
- Upgrade or downgrade line speeds quickly
- Add branches as you grow
- One monthly bill covering every site

Built for business

For businesses with more than one address. Branch offices replicating to head office, a warehouse feeding stock data to a shop floor, or cameras reaching a control room without a public IP anywhere near them. New branches are not held up waiting for old infrastructure.

What's included

- Dedicated link at each site, minimum of two
- Uncapped, unmetered and unshaped data
- Continuous monitoring
- Flexible speed upgrades and downgrades
- Single monthly billing across all branches

Support you can rely on

7-day support, including public holidays, through our call centre, chat assistant and website. Backed by local technicians in your own country.
